Subject Index to Volume XXIII

Acidogenic fermentation, characterization of, 185
—, of corn stover, 61
—, of lignocellulose, 2167(C)
Acrylamide, inactivation of cytochrome by, 2875(C)
—, purification of, 1919(C)
Aeration, in fermentors, 1171
—, measurement of K_La, 277, 301, 1467, 1611
Aerobic processes, oxygen uptake in, 1193
—, yield and maintenance, 739
Agarose, for enzyme immobilization, 1977
Alcohol dehydrogenase, immobilized, stability of, 2851
Alcoholic fermentation, See ethanol fermentation
Algae, glycerol production by, 1267
Algae ponds, for wastewater treatment, 2185
Algal cultures, carbon sources and regulation, 995
Alginate gels, for separations, 707
Alginic acid copolymers, for enzyme immobilization, 1889(C)
Alkaloid production, by *Claviceps purpurea*, 2837
Alumina, for enzyme immobilization, 1721
Amino acids, enzymatic synthesis of, 243(E)
Aminoacylase, immobilized, 1675
Ammonia, excretion by *Azotobacter chroococcum*, 467(C)
Amyloglucosidase, immobilized, 2083, 2273
Anabaena cylindrica, biophotolytic system, 213
Anaerobic digestion, inhibition by fatty acids, 1591
—, intermediates in, 1145
—, for municipal wastewater purification, 2001
Anaerobic processes, 185, 1145, 2293, 2307
Antibiotic fermentations, optimal substrate profile for, 2771
Antibiotics, isolation from fermentation broths, 1255
Arthrobacter, glucose isomerase containing, 1437
Aspergillus niger, biomass and citric acid production by, 2433
—, pectolytic enzyme complex of, 2231
Aspergillus terreus, cellulase activity and protein production by, 1653
ATP, regeneration of, 1103
Azotobacter chroococcum, ammonia excretion by, 467(C)
Bacillus thuringiensis, bioinsecticide manufacture, 1079
Bacteria, cellulolytic, growth on bagasse, 1423
Bagasse, crystallinity variation and cellulase activity, 1431
—, growth of cellulolytic bacteria on, 1423
Batch processes, 97, 249, 567, 1015, 1563, 1851, 2069
Biocatalyst, nonuniformly distributed, design of, 2591
Saccharomyces cerevisiae bioenergetics, 2373
Bioinsecticide, manufacture of, 1079
Biological waste treatment, nitrogen removal, 615
Biological waste treatment processes, 615, 2001, 2185
Biomass, algae, production of, 2185
—, conversion to sugars and ethanol, 163
—, heats of combustion of, 2051
Biophotolysis, outdoor system, using *Anabaena cylindrica*, 213
Biosorption, of uranium and thorium, 583
Blood, animal, concentration by ultrafiltration, 19
Brevibacterium flavum, immobilized, 899
2,3-Butanediol, separation of isomers, 1289

Candida krusei, alcohol utilization by, 267
Candida utilis, disruption of, 765
Carbohydrates, utilization by *Thermomonospora* sp. 1325
Carbon dioxide, dissolved, determination of, 2397(C)
—, sensor for, 461(C)
Carcinogenesis, *in vitro* testing, 2659
Casein, hydrolysis by immobilized chymotrypsin, 677
Cassava, ethanol production from, 291
Catalase, alcohol precipitation of, 2569
—, immobilized, 805
Cell density, measurement of, 1903(C)
Cell disruption, in high pressure flow devices, 765
Cell growth, productivity in, 249
Cellobiase, substrate and product inhibition of, 2779
Cellobiose, enzymatic hydrolysis of, 1501
Cells, immobilized, 29, 345, 535, 605, 651(C), 899, 1057, 1087, 1437, 2151(C), 2747
—, immobilized, gas production by, 651(C)

—, immobilized, membrane-entrapped, 221(C)
Cells, mammalian, See tissue culture
Cellulase, assay procedures for, 1573
—, enzymatic hydrolysis of, 2009
—, evaluation of culture filtrates, 2009
—, fungal, 2863
—, production by *Aspergillus terreus*, 1653
—, production by *Trichoderma reesei*, 1837, 2641(C)
—, production by *Thermomonospora* sp. 1339
Cellulomonas, fermentation of bagasse, 1431
Cellulose, effect of chemical treatments on, 2863
—, for enzyme immobilization, 1669(C)
—, structural features, 419(C)
Cellulose (cotton straw), degradability of, 2863
Cellulose hydrolysis, enzymatic, rate of, 419(C)
—, enzymatic, using immobilized β-glucosidase, 473
—, wheat straw, 823
Cellulose (newspaper), hydrolysis of, 1365
Cellulose (straw), hydrolysis of, 1527
Cellulose (sugarcane), degradability of, 2737
Centrifugal separation, in bioinsecticide manufacture, 1079
Centrifuge, continuous-flow zonal, 1
—, industrial, for yeast separation, 335
—, total containment of, 1
Cephalexin synthesis, by immobilized enzymes, 361
Chaetomium cellulolyticum, for microbial protein production, 2407, 2417
Chitin, for enzyme immobilization, 231(C), 2211
—, waste, conversion to single-cell protein, 1067
Chlorella vulgaris, energetics of growth, 1121
Chloroplasts, immobilized, 2283
—, immobilized, radiation-induced, 833
Chromatography, diffusional, 707
—, liquid, for butanediol separation, 1289
—, partition coefficient theory for, 1349
Chymotrypsin, immobilized, 677
α-Chymotrypsin, immobilized, 1219
Citric acid, production by *Aspergillus niger*, 2433
Claviceps purpurea, growth and alkaloid production by, 2837
Collagen, for cell immobilization, 899
—, reconstituted, for enzyme immobilzation, 2609
Commensalism, dynamics of, 2243
Computer, fermentor system, 405
—, for off-gas analysis, 455(C)
Continuous cultivation, microalgal, 995
—, tissue culture, 983
—, yeast, 2361
Continuous fermentation, 373, 523, 535, 1661(C)
—, with cell recycle, 373, 523
—, control of, 887
Control, automatic, 1491
—, computer, 405
—, fermentation system, 391
—, multilevel, of continuous fermentation, 887
—, oxygen tension, feed-on-demand, 2137(C)
—, quasi-steady-state, yeast fermentation, 921
Corn dust, microbial growth on, 2333
Corn stover, acidogenic fermentation of, 61
Cytophaga, lytic enzymes from, 1045
—, production of yeast-lytic enzymes by, 97

Denitrification, kinetics of, 2403(C)
Dextran, production by dextransucrase, 2027
Dextransucrase, immobilized, 2027, 2647(C)
Dialysis, in ammonium lactate fermentation, 523, 535
Diffusion, intraparticle, in immobilized enzymes, 1991

Earthworms, as protein source, 1797
Egg white, for enzyme immobilization, 431(C)
Electrode, oxygen, for measuring K_La, 277
Electrodes, micro-, for oxygen transfer, 781
—, platinum, glucose oxidation at, 1159(C)
—, potentiometric biosensing, 627
Electrolysis, for wastewater treatment, 1881(C)
Energetics, microbial, 1851
—, of *Chlorella vulgaris*, 1121
—, of *Saccharomyces cerevisiae*, 1763
—, of *Scenedesmus acutus*, 1121
Penicillium duponti enzyme, immobilization of, 2609
Enzyme catalysis, in water–solvent system, 355
Enzyme deactivation, kinetics of, 691, 805
Enzyme reactions, diffusion-limited, 487
—, with two substrates, 939
Enzyme reactors, 939
Enzymes, immobilized, 41, 231(C), 361, 431(C), 473, 487, 663(C), 677, 805, 965, 1037, 1219, 1389(C), 1537, 1675, 1889(C), 1907(C), 1913(C), 1961, 1977, 2161(C), 2211
—, immobilized, kinetics, 965, 1087
—, immobilized, kinetics of, 2447, 2465
—, immobilized, mechanical control of activity, 2601
—, immobilized, preparation, 2093
—, immobilized, preparation of, 231(C), 431(C), 663(C), 1669(C), 1721, 1889(C), 1907(C), 1913(C), 2083, 2273
—, immobilized, stability of, 1219, 1991
—, in preparative organic synthesis, 1115
—, yeast lytic, isolation and use, 1045
—, yeast-lytic, production of, 97
Errata, 243, 917, 1169
Escherichia coli, aerobic growth of, 2825
—, growth of, 1015
Ethanol, utilization by *Candida krusei*, 267
Ethanol fermentation, of glucose, optimization of, 1827
—, inhibition by ethanol, 201
—, of sweet potato, 879
Ethanol production, from biomass, 163
—, by *Zymomonas mobilis*, 1449

—, from cassava, 291
—, by immobilized yeast, 1813
—, from Jerusalem artichoke, 1461
—, from wheat straw, 1527

Fatty acids, inhibition of anaerobic digestion by, 1591
Films, bacterial, thickness of, 1155(C)
—, fouling, development of, 1923
—, kinetics of, 2149(C)
Flocculation, electrolytic method for, 1165(C)
Fluidized beds, biological, 2145(C)
Foaming, protein concentrate on by, 669
Foot-and-mouth disease virus, production of, 551
Fouling, biofilm, 1923
Fungal peroxidase, immobilized and free, 2161(C)

Gas analysis, computer-based, 455(C)
Glucose, ethanol fermentation of, 1827
—, isomerization by glucose isomerase, 1087
—, oxidation at electrodes, 1159(C)
Glucose isomerase, *Arthrobacter* containing cells, 1437
—, continuous reactor system, 1237
Glucose oxidase, immobilized, 1037, 2093, 2601
β-Glucosidase, immobilized, 473
—, inhibition of, 1553
—, production by *Trichoderma reesei*, 1837
Glutamic acid, production of, 899
Glycerol, algal production of, 1267
Growth, molds on semi-solid cultures, 321
—, yeast, effect of pH on, 1623
—, yeast, mathematical model of, 1735

Hemicellulase, production by *Trichoderma reesei*, 1837
Hydantoins, microbial transformations to amino acids, 2173
Hydrocarbon fermentations, energetic yields, 793
Hydrogen, photometabolic production of, 605
Hydrogenase, immobilized, for detritiation of water, 1537

Invertase, immobilized, 231(C), 917(E)
Isopropanol, utilization by *Canadida krusei*, 267

Jerusalem artichoke, ethanol production from, 1461

Kinetics, biofilm, 2149(C)
—, of biomass and citric acid production by *A. niger*, 2433
—, of cytochrome inactivation, 2875(C)
—, denitrification, 2403(C)
—, of enzyme deactivation, 691
—, of glucose isomerization, 1437
—, hyperbolic, significance of, 1409(C)
—, of immobilized enzyme reactions, 487, 1349, 2447, 2465
—, of metabolite formation, 1373
—, microbial, determination of parameters, 1485
—, multiproduct fermentations, 1517
—, nitrification, 1683
—, of penicillin formation, 1563
—, of phenol oxidation, 2039
—, polysaccharide hydrolysis, 1393(C)
—, of protein hydrolysis, 2257
Klebsiella pneumoniae, growth of, 1401(C)
—, hydrogen production by, 605

Lactate dehydrogenase, immobilized, 1721
Leafy crops, protein recovery from, 1417(C)
Leuconostoc mesenteroides, dextransucrase of, 2647(C)
Lignin, controlled biotransformation of, 2171(C)
Lignocellulose, acidogenic fermentation of, 2167(C)
Lignocellulosic materials, degradation of, 2525

Magnetic supports, for enzyme immobilization, 677
Magnetite, for enzyme immobilization, 1037
Media, fermentation, oxygen solubility in, 635
Membranes, self-cleaning, for ultrafiltration, 843
Metal–chelate carriers, for enzyme immobilization, 663(C)
Methane, production from chicken manure, 2307
Methanol, yeast growth on, 499
Methanosarcina barkeri, immobilized, 1057
Microcalorimeter, for aerobic cultivation, 2629, 2825
Microcarrier culture, applications, 2673
Micrococcus agilis, aminoacylase from, 1675
Microfluorometry, flow, 2217
Mitochondrial electron transport particles, 1103
Mixed cultures, commensalism and competition in, 1639
Modeling, macroscopic electric charge balance in, 1133
Models, aerobic yeast growth, 1735
—, distributed parameter, for airlift fermentors, 1309
—, fed-batch culture, 1851
—, immobilized enzyme kinetics, 2447, 2465
—, macroscopic, aerobic processes, 739
—, secondary metabolite production, 717
Mold morphology, effect of engineering variables on, 111
—, quantitative representation of, 149
Molds, filamentous, cultivation of, 863
—, filamentous, morphology of, 111
Multiproduct fermentations, kinetics of, 1517
Mutagenesis, *in vitro* testing, 2659

Nitrification, kinetics of, 1683
Nylon–coacrylonitrile copolymer, for enzyme immobilization, 2887(C)

Optimization, ethanol fermentation, 1827
Organic acids, production, by mixed-culture anaerobes, 2293
Organic synthesis, enzymes in, 1115
Osmosis, reverse, for water purification, 2001
Oxygen, dissolved, control of, 2137(C)
—, dissolved, profiles in microbial slimes, 1893(C)
Oxygen absorption, enhancement of, 1037
Oxygen level, control of *E. coli* growth, 1015
Oxygen solubility, determination of, 1897(C)
—, in fermentation media, 635
Oxygen transfer, requirements for *Thiobacillus ferrooxidans*, 1413(C)
—, in trickling filter slimes, 781
Oxygen transfer characteristics, double draft tube fermentor, 2117
Oxygen transfer rate, effect on pectolytic enzymes of *A. niger*, 2231
—, measurement of, 277, 301, 1611
Oxygen uptake, two phase, 1193
Oxyreductases, immobilized, 1721

PAB-cellulose, for enzyme immobilization, 1907(C)
Papain, immobilized, 1669(C), 1907(C), 1977
Pectolytic enzymes, of *Aspergillus niger*, 2231
Penicillin, kinetics of formation, 1563
Penicillin fermentation, quantitative characterization of, 2803, 2815
Penicillium chrysogenum, kinetics of product formation in, 1563
Peptide, enzymatic synthesis of, 355
Phenol, oxidation, kinetics of, 2039
Phenoxyacetyl cellulose, for enzyme immobilization, 2647(C)
D-Phenylglycine, isolation from racemic mixture, 1675
Photochemical energy conversion, 2283
Plant cells, cultivation at high density, 1203
Polyacrylamide copolymers, for enzyme immobilization, 1889(C)
Polyacrylamide gels, for enzyme immobilization, 2151(C), 2747
Polysaccharide hydrolysis, enzymatic, kinetics of, 1393(C)
Polytetrafluoroethylene, for enzyme immobilization, 1913(C)
Polyvinylchloride membrane, for enzyme immobilization, 2601
Progesterone, hydroxylation of, 345
—, selective dehydrogenation of, 2881(C)
Protease, production by immobilized *Streptomyces fradiae*, 29
Protein, alcohol precipitation of, 2569
—, concentration by foaming, 669
—, earthworms as source of, 1797
—, effects of shear on, 425(C), 1169(E)
—, hydrolysis, continuous reactor for, 2257
—, immobilized, preparation of, 855
—, microbial, 267
—, microbial, from C_1 compounds, 235(C)
—, microbial, from swine manure, 2407
—, microbial, from waste chitin, 1067
—, microbial, from waste sulfite liquor, 2105
—, microbial, kinetics of syntheses in fission yeast, 2315
—, microbial, production by *Chaetomium cellulolyticum*, 2407, 2417
—, microbial, production of, 1491
—, recovery from leafy crops, 1417(C)
—, ultrafiltration of, 1873(C)
—, vegetable, enzymatic modification of, 2609
Proteus vulgaris, mixed cultures of, 1639
Protoplasts, plant regeneration from, 2691
Purification, of acrylamide and *N,N'*-methylene–bisacrylamide solutions, 1919(C)

Reactors, biological, airlift fermentor, 863
—, biological process, aerated, 1171
—, biological process, aeration capacity of, 1467
—, biological process, airlift fermentor, 1309, 2421
—, biological process, airlift fermentors, optimal design of, 2537
—, biological process, automated, 391, 405
—, biological process, fluidized bed, 1683, 2145(C)
—, biological process, hollow fiber, 79, 447(C)
—, biological process, mechanical interactions in, 441(C)
—, biological process, oxygen transfer and mixing in, 2117
—, biological process, photochemical, 657(C)
—, biological process, sampling valve for, 437(C)
—, biological process, temperature control in, 1399(C)
—, enzyme, 1237, 1389(C)
—, enzyme, batch and plug-flow, 225(C)
—, enzyme, continuous, for protein hydrolysis, 2257
—, enzyme, membrane, 1297, 1501, 2199, 2789
—, enzyme, packed bed, 41, 691, 1961, 1977
—, enzyme, recycle, 2609
—, immobilized enzyme, fluid bed, 2561
—, mycelial, 1703
Rennet, thermophilic, purification and characterization of, 2483
Rhizopus arrhizus, lipolytic enzymes of, 1703
Rhizopus nigricans, immobilized, 345
Rhodospirillum rubrum, hydrogen production by, 605
Ribonuclease, characterization and properties, 953
Rumen microorganisms, cellulose hydrolysis by, 2863

Saccharomyces carlsbergensis, ribonuclease from, 953
Saccharomyces cerevisiae, aerobic growth of, 1735

—, effect of pH on continuous culture of, 1661(C)
—, effect of pH on growth of, 1623
—, energetics, 1023
—, energy metabolism and cell cycle of, 1763
—, mixed cultures of, 1639
Saccharomycopsis fibuligera, growth of, 2361
Scenedesmus acutus, energetics of growth, 1121
Scenedesmus dimorphus, phenotypic variation of, 2185
Secondary metabolites, production of, 717
Shaken vessels, steady-state behavior of, 451(C)
Shear, effects on proteins, 425(C), 1169(E)
Solids, mold growth on, 321
Statistical analysis, batch data, 2391(C)
Steroids, transformation by immobilized cells, 345
Streptomyces clavuligerus, antibiotic production by, 2747
Streptomyces fradiae, protease production by, 29
Sulfite liquor, microbial production from, 2105
Surfactants, effects on enzymatic hydrolysis of cellulose, 1365
Sweet potato, alcoholic fermentation of, 1297
—, hydrolysis of, 879

Teflon, porous, application to fed-batch culture, 2493, 2509
—, porous, mass transfer through, 2493
Temperature, control in biological process reactors, 1399(C)
—, effects on *Candida krusei*, 267
—, influence on growth of *Klebsiella pneumoniae*, 1401(C)
Thermomonospora sp., cellulase production by, 1339
—, utilization of carbohydrates by, 1325
Thienamycin, isolation procedure for, 1255
Thiobacillus ferrooxidans, inhibition by particulate materials, 2761
—, oxygen transfer requirements of, 1413(C)
Thorium, biosorption of, 583
Tissue culture, anchorage-dependent cells, 2703
—, animal and plant cell, 2655
—, continuous, with microcarriers, 983
—, hollow fiber system for, 79
—, large-scale growth of mammalian cells, 2717
—, scale-up of process, 551
Trichoderma reesei, cellulase production by, 1837
—, β-glucosidase activity in, 1553
Triglycerides, enzymatic hydrolysis of, 1703

Ultrafiltration, animal blood concentration by, 19
—, membranes for, 843
—, proteins, effect of pH, 1873(C)
Uranium, biosorption of, 583

Valve, sampling, for laboratory fermenters, 437(C)
Viability criteria, correlation among, 1407(C)

Waste treatment, by electrolysis, 1881(C)
Wheat straw, saccharification of, 823
Wood, pretreatment, for microbial protein production, 2417

Yeast, bakers', mechanically disrupted, 335
—, bakers', metabolism in aerobic fed-batch cultures, 567
—, bakers, production in fed-batch culture, 2069
—, bakers', separation by centrifugation, 335
—, fed-batch cultivation on ethanol, 2509
—, fission, continuous cultivation of, 2217
—, fission, protein synthesis kinetics, 2315
—, inulinase activity in, 1461
—, methanol consuming, 499
Yeast alcohol dehydrogenase, immobilized, 965
Yeast cells, immobilized, 1813
—, rupture by lytic enzymes, 1045
Yeast fermentation, quasi-steady-state control, 921
Yields, in aerobic processes, 739
—, energetic, for hydrocarbon fermentations, 793

Biotechnology and Bioengineering

Information for Contributors

1. Manuscripts should be submitted to Dr. Elmer L. Gaden, Jr., Editor, Biotechnology and Bioengineering, Department of Chemical Engineering, Thornton Hall, University of Virginia, Charlottesville, Virginia 22903. Address all other correspondence to the publisher: Journals Department, John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158.
2. Manuscripts for publication that have not been published elsewhere and all correspondence regarding papers prior to their acceptance should be sent to Dr. Gaden. The editors desire to receive manuscripts on biochemical and microbiological technology and the basic researches that underlie their successful employment.
3. It is the preference of the editors that papers be submitted in the English language.
4. Manuscripts should be submitted in duplicate (one *original*, one carbon copy), typed *double* space throughout, on a *heavy* grade of paper, with 1-in. margins.
5. A *short summary* of the main contributions in the paper *is required*. This summary should be carefully prepared, for it will automatically be the source of most abstracts. Authors should supply up to five key words or phrases that best characterize their manuscript.
6. The paper should be reasonably subdivided into sections and, if necessary, subsections. Please refer to any issue of this Journal for examples.
7. The references should be numbered consecutively in the order of their appearance and should be complete, including authors' initials and—for unpublished lectures or symposia—the title of the paper, the date, and the name of the sponsoring society. Please compile references on a separate sheet at the end of the manuscript.
8. Please avoid footnotes to the text. Where possible, material intended for footnotes should be inserted in the text as parenthetical material.
9. Please supply numbers and titles for all tables. All table columns should have an explanatory heading.
10. It is particularly important that all figures be submitted in a form suitable for reproduction. *Good glossy photographs* are required for halftone reproductions. For line drawings (graphs, etc.), the figures must be drawn clearly with India ink on heavy white paper, Bristol board, drawing linen, or coordinate paper with a very light blue background. The India ink lettering of graphs must be large, clear, and "open" so that letters and numbers do not fill in when reduced for publication. It is the usual practice to submit drawings that are twice the size of the final figures: the maximum final size of figures for this journal is $4 \times 6\frac{1}{2}$ inches. It is the author's responsibility to obtain written permission to reproduce material which has appeared in another publication. If in doubt about the preparation of illustrations suitable for reproduction, please consult the publisher at the address given in paragraph 1 and ask for a sample drawing.
11. Please supply legends for all figures and compile these on a separate sheet.
12. Authors are cautioned to type—wherever possible—all mathematical and chemical symbols, equations, and formulas. If these must be hand-written, please write clearly and leave ample space above and below for printer's marks: please use only ink. All Greek or unusual symbols should be identified in the margin the first time they are used. Please distinguish in the margins of the manuscript between capital and small letters

of the alphabet wherever confusion may arise (e.g., k, K, κ). Please underline with a wavy line all vector quantities. Use fractional exponents to avoid root signs. The nomenclature sponsored by the International Union of Pure and Applied Chemistry is requested for chemical compounds. Chemical bonds should be correctly placed, and double bonds clearly indicated. Valence is to be indicated by superscript plus and minus signs.

13. Senior authors will receive 50 reprints of their articles without charge. Additional reprints can be ordered and purchased by filling out the form attached to the galley proof. Page proofs will not be supplied.
14. No manuscript nor its figures will be returned following publication unless a request for return is made when the manuscript is originally submitted.
15. With the advent of the U.S. copyright law effective January 1978, the transfer of copyright from author to publisher, heretofore implicit in the submission of a manuscript must now be clearly stated in writing to enable the publisher to assure maximum dissemination of the author's work. A copy of the transfer of copyright agreement to be used for *Biotechnology and Bioengineering* appears in this issue. (Additional copies are available from the Editor.) A copy of that agreement, executed and signed by the author, is now required with each manuscript submission. (If the article is a "work made for hire," the agreement must be signed by the employer.)

Manuscripts and illustrations not conforming to the style of the Journal will be returned to the author for reworking, thus delaying their appearance.

Publication Agreement

Under U.S. law, the transfer of copyright from the author should be explicitly stated in writing to enable the publisher to disseminate the author's work to the fullest extent. Please complete a copy of the following Publication Agreement and *include it with all submissions to this journal.* Please note that if the manuscript was a work made for hire, this agreement must be signed by the employer, as author.

Publication Agreement

The undersigned author has submitted a manuscript entitled_____

_____

for publication in_____, published by John Wiley & Sons, Inc.

A. The author transfers to John Wiley & Sons, Inc. the exclusive rights comprised in the copyright of the article, if the article is accepted for publication, except that the author retains the following:

1. All proprietary rights, other than copyright, such as patent rights.
2. The right to make copies of all or part of the work for the author's use in classroom teaching.
3. The right to use, after publication, all or part of this material in a book by the author.
4. The right to make copies of the work for internal distribution within the institution which employs the author.
5. The right to use figures and tables from the work, and up to 250 words of text, for any purpose.
6. The right to make oral presentation of the material in any forum.
7. The right to veto or approve permission granted by the publisher to a third party to republish all or a substantial part of the article.

In the case of work prepared under U.S. Government contract, the U.S. Government may reproduce, royalty-free, all or portions of the article and may authorize others to do so, for official U.S. Government purposes only, if the contract so requires.

The author agrees that all copies made under any of the above conditions will include notice of the copyright of the publisher.

B. The author warrants that the manuscript is the author's original work. If the work was prepared jointly the author agrees to inform co-authors of the terms of this agreement. It is submitted only to this journal, and has not been published before. (If excerpts from copyrighted works are included, the author will obtain written permission from the copyright owners and show credit to the sources in the manuscript.) The author also warrants that the article contains no libelous or unlawful statements, and does not infringe on the rights of others.

Institution or company

Note to Government Employees

A work prepared by a government employee as part of his/her official duties is called a "work of the U.S. Government," and is not copyrightable. If it is not part of the employee's official duties it may be copyrighted. If this is a work of the U.S. Government, the author may cross out Section A of this agreement and attach a copy of applicable policy of author's agency.

If the work was prepared jointly, and any co-author is not a U.S. Government employee, that author must be delegated by the co-authors to sign the *complete* agreement.

Statement of Ownership, Management and Circulation
(Required by 39 U.S.C. 3685)

1. Title of publication: Biotechnology and Bioengineering
2. Date of filing: 1 October 1981
3. Frequency of publication: Monthly
   A. Number of issues published annually: 12
   B. Annual subscription price: $170.00
4. Complete mailing address of known office of publication: John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158
5. Complete mailing address of the headquarters or general business offices of the publishers: John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158
6. Publisher: John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158
   Editor: Elmer Gaden, Jr., Thornton Hall, University of Virginia, Charlottesville, VA 22903
   Managing Editor: None
7. Owner: John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158

   The following is a list of stockholders owning or holding 1% or more of John Wiley & Sons, Inc. stock as of August 1981: Cynthia W. Darby, Box 651, Bridgehampton, NY 11932; Hamilton Darby, Box 651, Bridgehampton, NY 11932; W. B. Wiley, W. B. Wiley II, P. B. Wiley, and Deborah Wiley, Executors of the Estate of Edward P. Hamilton, c/o Gifford, Woody, Palmer & Searles, 14 Wall Street, New York, NY 10005; W. Bradford Wiley and Deborah Wiley, Trustees, Elizabeth W. Hamilton Trust, 605 Third Avenue, New York, NY 10158; Morgan Guaranty Trust and W. B. Wiley, Trustees under will of Elizabeth Wiley Hamilton, c/o Morgan Guaranty Trust Co., P.O. Box 491, Church St. Station, New York, NY 10008; Jenny R. Proskauer, P.O. Box 238, Church St. Station, New York, NY 10008; W. Bradford Wiley and Peter Booth Wiley, Trustees, f/b/o/ Deborah Elizabeth Wiley, c/o John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158; Cede & Co., Box 20, Bowling Green Station, New York, NY 10006; J. E. Orr & Co., Chemical Bank, P.O. Box 1368, Church St. Station, New York, NY 10008; W. Bradford Wiley and W. Bradford Wiley II, Trustees, f/b/o/ Peter Booth Wiley, 605 Third Avenue, New York, NY 10158; W. Bradford Wiley and Deborah Wiley, Trustees, f/b/o/ William Bradford Wiley II, c/o John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158; Hamilton D. Darby and Cynthia Wiley Darby, Trustees under will of William O. Wiley, c/o Gifford, Woody, Palmer & Searles, 14 Wall Street, New York, NY 10005; Adele E. Windheim, 8 Dundee Road, Larchmont, NY 10538; Mrs. Rosamond R. Pennywitt, 49 Bristol Place, Bay Head, NJ 08742; Lerche & Co./Bank of New York, P.O. Box 11 203, New York, NY 10049; Morgan Guaranty Trust Company, 23 Wall Street, New York, NY 10015; W. Bradford Wiley, 605 Third Avenue, New York, NY 10158.

8. Known bondholders, mortgagees, and other security holders owning or holding one percent or more of the total amount of bonds, mortgages, or other securities: None
10. Extent and nature of circulation

	Average number of copies of each issue during preceding 12 months	Actual number of copies of single issue published nearest to filing date
A. Total number of copies printed	2100	2100
B. Paid circulation		
1. Sales through dealers and carriers, street vendors and counter sales	none	none
2. Mail subscriptions	1839	1832
C. Total paid circulation	1839	1832
D. Free distribution by mail, carrier or other means, samples, complimentary, and other free copies	31	32
E. Total distribution	1870	1864
F. Copies not distributed		
1. Office use, left over, unaccounted, spoiled after printing	230	236
2. Returns from news agents	none	none
G. Total	2100	2100

11. I certify that the statements made by me above are correct and complete.

Mary Curtis, *Business Manager*

an Interscience® Publication
© 1981 by John Wiley & Sons, Inc.

Published monthly, one volume plus symposium per year, by John Wiley & Sons, Inc.
Copyright © 1981 by John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158. All rights reserved. Reproduction or translation of any part of this work beyond that permitted by Sections 107 and 108 of the United States Copyright Law without the permission of the copyright owner is unlawful. Second class postage paid at New York, New York, and at additional mailing offices.

The code and the copyright notice appearing at the bottom of the first page of an article in this journal indicate the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients, on the condition that the copier pay for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The per-copy fee for each article appears after the dollar sign and is to be paid through the Copyright Clearance Center, Inc., 21 Congress Street, Salem MA 01970. (The fee for articles published prior to 1978 is $1.00.) This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Such permission requests and other permission inquiries should be addressed to the publisher.

Subscription price (1982): $195.00 per volume. Postage and handling outside U.S.A.: $26.00 by surface; $110.00 by air. Please allow four weeks for change of address. Back volumes, microfilm, and microfiche are available for previous years. Request price list from publisher.

Claims for undelivered copies must be made no later than three months following month of publication. Missing copies will be supplied when losses have been sustained in transit and where reserve stock will permit.

Manuscripts should be submitted in duplicate to DR. ELMER L. GADEN, JR., Department of Chemical Engineering, Thornton Hall, University of Virginia, Charlottesville, Virginia 22903. Address all other correspondence to Journals Department, John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158.
